

HANDOVER FRAMEWORK

When AI stops, a human steps in

Each tier needed its own logic. The work was in the precision: identifying the right category, writing the right instructions, making sure the AI knew when to respond and when to step aside.

“My baby won't wake up”

EMERGENCY
AI stops. Route to 911.
Handover to human.

“Could this be a disorder?”

MEDICAL
Redirect to pediatrician.
Handover to human

“We have twins and a toddler and nobody is sleeping.”

COMPLEXITY
Give the parent a choice.
Hand over to consultant.

“Forget it, this isn't helping.”

FRUSTRATION
Acknowledge.
Offer to transfer.

UX Challenge

How does the AI meet the parent
where they are?
