

Insights & Opportunities

Key findings from user research informed our design strategy. Multiple insights like users wanting intentional control over vehicle responses led to design opportunities for improving hands-free cargo entry.

INSIGHT

People want their car to only respond when they have displayed an intention for the car to perform an action

“ If I want it to open I’ll look at it or tell it to open, I don’t want it to automatically open every time I walk by.

TRUCK DRIVER 6, 2021 DODGE RAM

“ Even if I don’t have anything in my hands, I can look and intentionally make it open.

TRUCK DRIVER 7, 2022 F150

OPPORTUNITY

How might we make implicit inputs (smart contextual awareness from the vehicle) more intentional and overt?

Experience Prototyping

Built physical systems with voice recognition, gaze tracking, and feedback mechanisms to validate user behaviors in controlled scenarios

Physical Setup
