

Preference Analysis

Analyzed user preferences across different vehicle types and accessibility needs. Mapped owner preferences, accessibility observations, and optimal sensor positioning to inform inclusive design decisions.

Interaction Guidelines

Detailed specifications for hands-free entry interactions. Defined precise parameters for visual attention, voice commands, and system responses to ensure consistent, intentional user experiences.

INTERACTION PATTERN DEFINITION

Visual Attention (or Gaze) requires intentionally looking at a target for 1.5 seconds from any distance between 0-20’.

INTERACTION PATTERN DEFINITION

Voice Command requires verbally stating a command (may be a Wake word) within the vicinity of the vehicle (0-20’).

INTERACTION NON-NEGOTIABLES

HFE option must be triggered by an action that is both intentional AND seamless

INTERACTION NON-NEGOTIABLES

The HFE option must be open by the time they are within 2ft of cargo or cabin door
