

Design Challenge

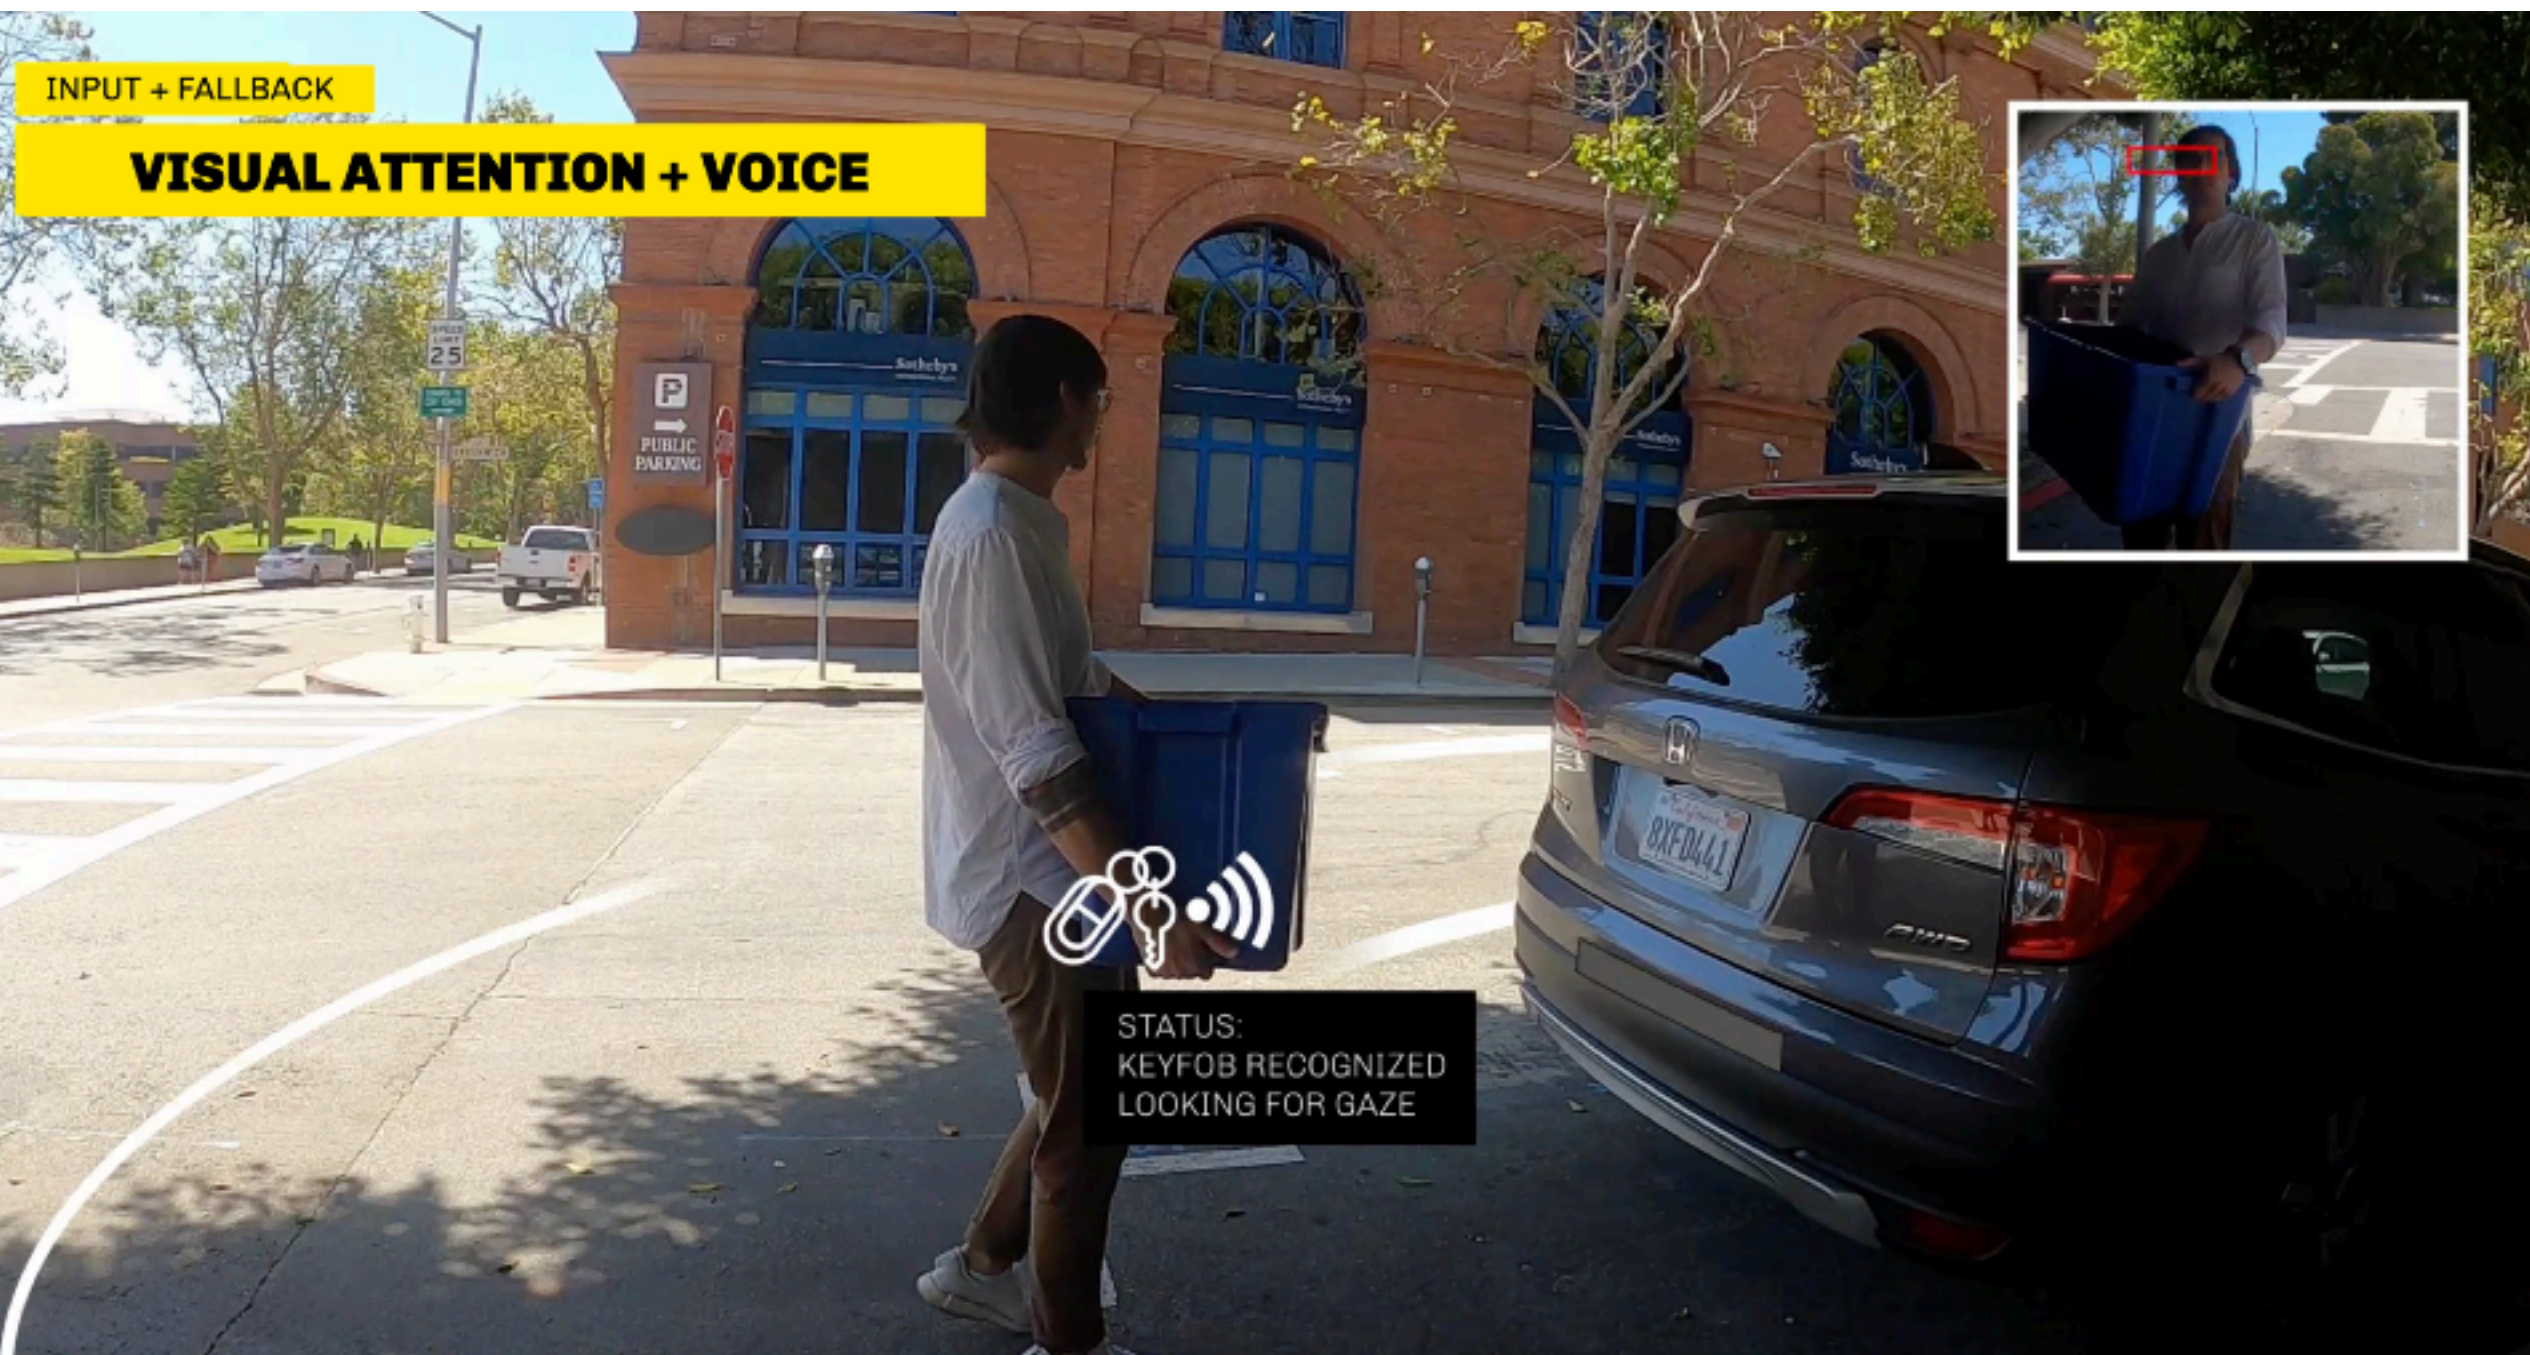

HMW design an optimal experience for approaching and accessing cargo & cabin spaces for the next generation of Ford owners*?

Experience will be consistent across vehicle types: family and truck

*Authorized owners, inclusive of customers with disabilities & impairments

Authorized non-owners, such as deliveries, renters or tradespeople is out of scope for this project.

Our POV built from iterative prototyping and research

A hands free entry modality that

- Is intentional
- Responds within a short time window
- Gives control to the driver
- Is contextually aware
